SCHOCK INVENTED THE GRANITE SINK
Even after more than 35 years, 80% of all granite sinks made in the world today are manufactured using SCHOCK methods - that’s 2 million granite sinks a year.

SCHOCK PREMIUM DESIGN
SCHOCK’s material technology enables the realisation of exceptional designs. Premium sinks from SCHOCK have won numerous design awards over the years.

SCHOCK MATERIAL TECHNOLOGY
Since the invention of the granite sink, SCHOCK materials have been continually refined and set new standards. This innovative spirit is reflected in more than 90 patents.

SCHOCK MATERIAL - HARDER THAN GRANITE
The special SCHOCK production method makes CRISTALITE® and CRISTADUR® ensure optimum safety when handling fresh food.

PROHYGIENIC21 - THE HYGIENE STANDARD
The patented surface quality of CRISTALITE® and CRISTADUR® ensure optimum safety when handling fresh food.

SCHOCK DIRT-REPELLENT EFFECT
The material’s fine structure means dirt that could be a breeding ground for bacteria finds it impossible to stick to the surface.
SCHOCK sinks are up to 80% natural quartz sand. CRISTADUR® and CRISTALITE® have been specially developed for the demands of the kitchen. The rigours of everyday use vanish with hardly a trace.

PRODUCT
BENEFITS

SCHOCK sinks are up to 80% natural quartz sand. CRISTADUR® and CRISTALITE® have been specially developed for the demands of the kitchen. The rigours of everyday use vanish with hardly a trace.
The sink and surrounding area is statistically the most frequently used part of the kitchen, so the rigours a sink has to withstand as people go about their daily chores are obviously especially great. But transportation to the customers is also a challenge for the packaging owing to the weight of the sink.

By ingraining a special fibreglass product in the bottom of the sink, SCHOCK has been able to increase the material’s impact resistance several times over, with the organic fibres cross-linking the quartz casting compound even better and affording the material greater elasticity.

The effect can be compared with the difference between concrete (tough) and reinforced concrete (tough and flexible). Developed in-house by the materials research team, the technology is patent pending.

---

Formula, ingredients and production

**Filler:**
- Microfine quartz sand (about 0.03–0.3 mm)
- Glossy surface
- Colour purity
- Unbeatable easy to clean

**Binder:**
- High quality, highly networked acrylic
- Glossy surface and dirt repellent effect

**Other ingredients:**
- Colour paste
- Colour purity
- Dirt repellent effect

* Impact resistance is up to 4x higher in the reinforced areas. (DIN 52453)
